this pertained to infantry entrenchments, because the work was done by infantry reservists, whereas the work at Pjetroshan had been done by artillery reservists.

3. The Koplik mobilization depot is located in a former tobacco warehouse among the warehouses assigned to the Koplik agricultural cooperative, about 500 meters east of the village on the south side of the road to Koplik i Siperm (N 42.14/E 19.28). Clothing, field equipment, individual arms and ammunition were stored at the depot. Under a shelter were parked 26 artillery pieces (of unknown size), including 22 AT guns and 4 AA guns. The guns were brought to the warehouse in 1961 at the time that the Soviets left Albania; they were seen travelling along the road. In September 1962, the commander of the depot was an unidentified Captain First Class. The installation is subordinate to an unidentified brigade in Shkoder. Guard duties are carried out by military personnel.
